2. Pararad Tuntiprapakij 6110422031

3. Norrawit Towanabut 6110422044

4. Sapharath Vanichtunyasub 6110422046

Problem

Lack
of labor

Low
productivity

Bad
quality

Inaccurate
estimation

How lot can improve business performance?

Reduce
labor cost

Increase
productivity

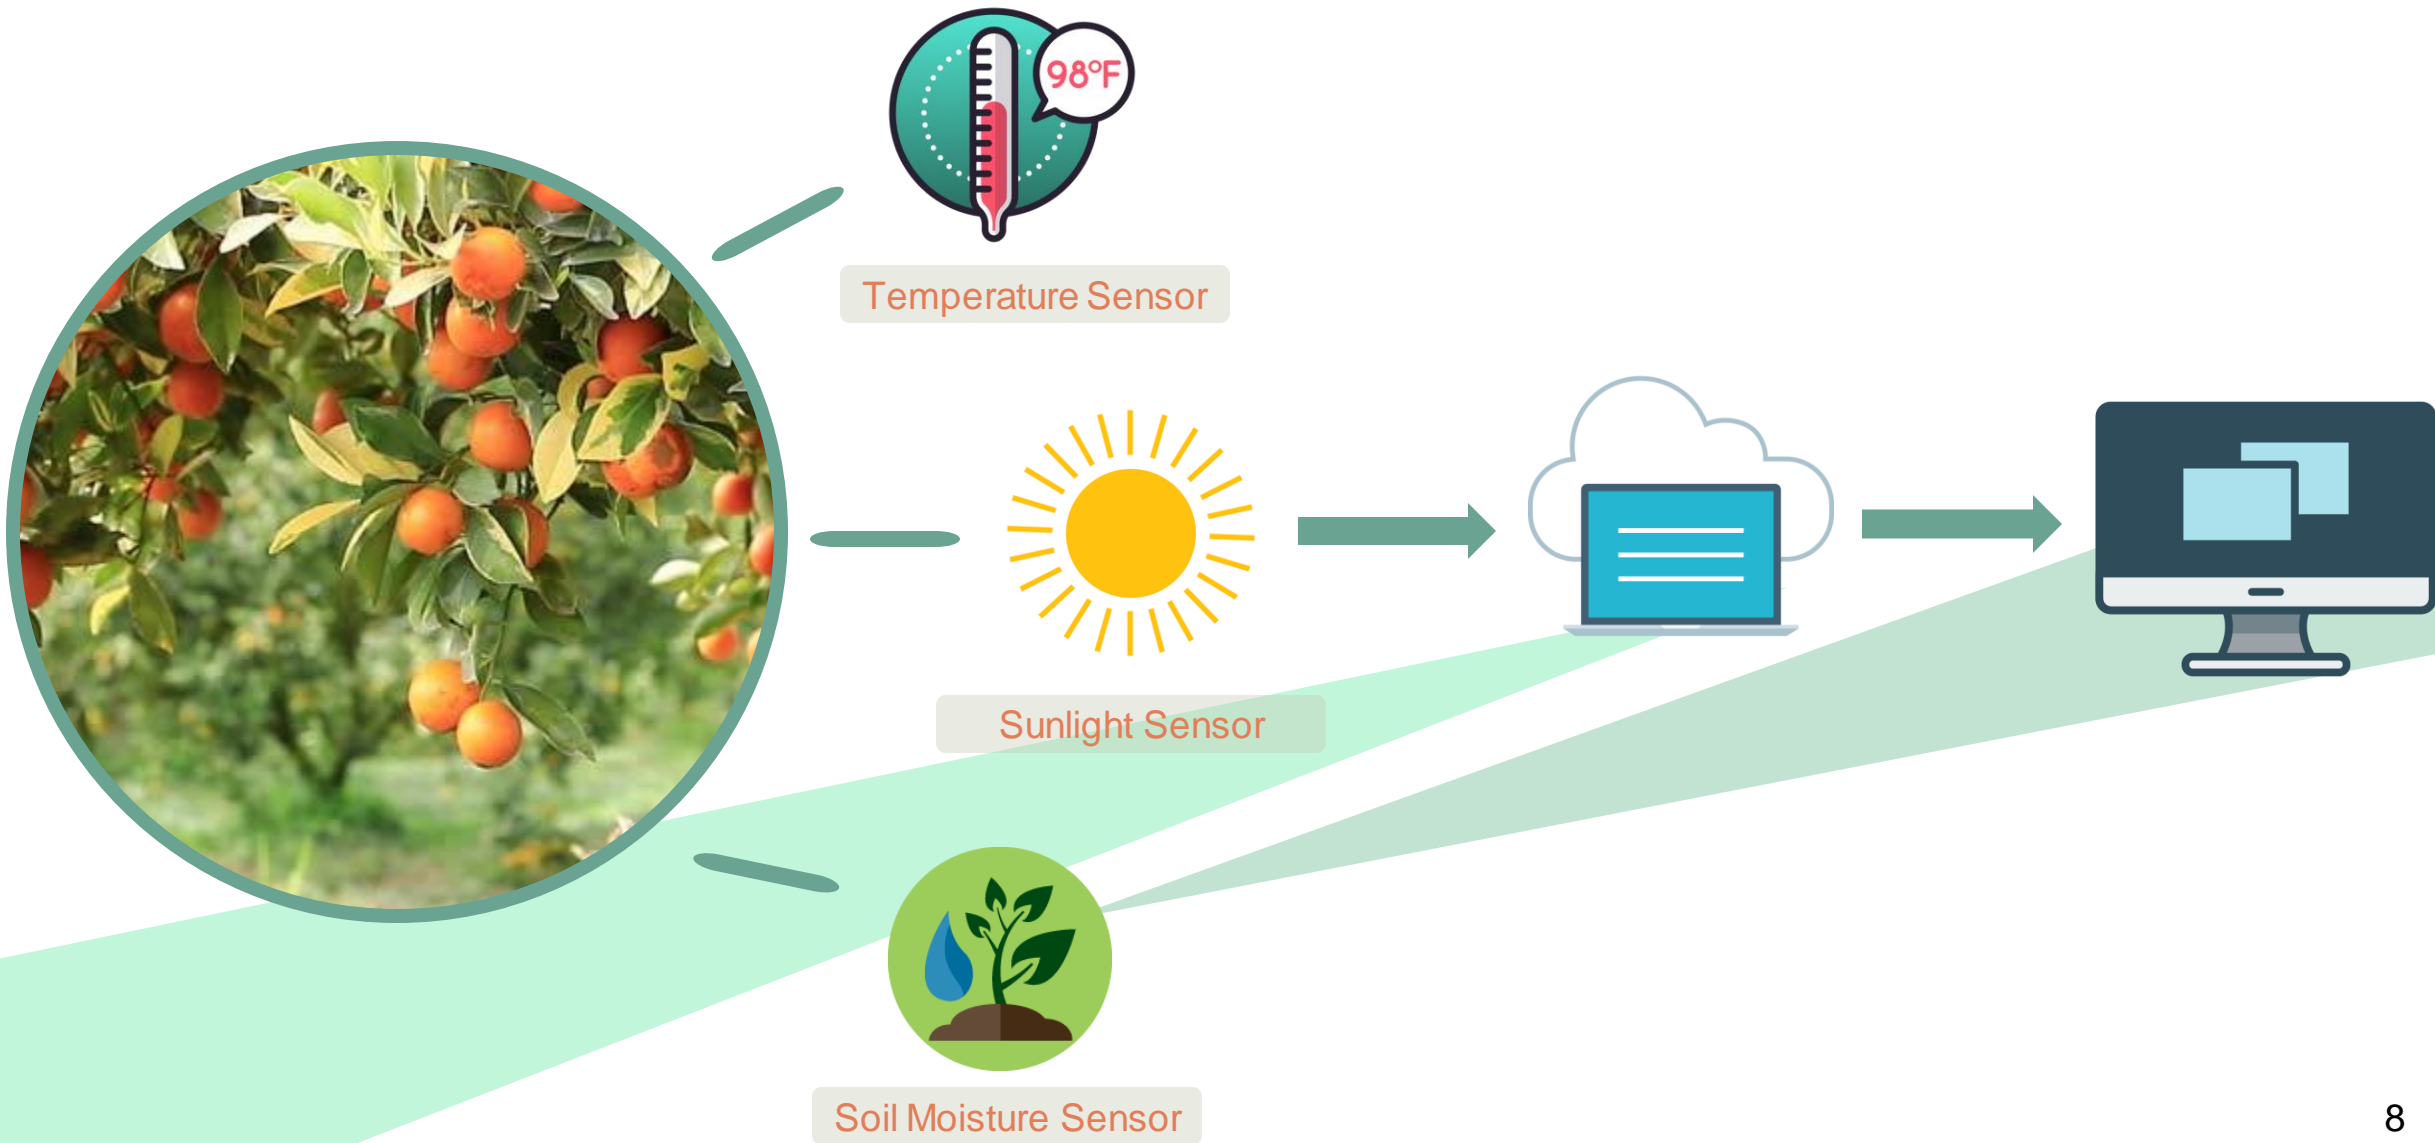

Improve
quality

Precision
estimation

System Overview

Components

ESP32

DHT11

Temperature Sensor

**LM393, Jumper,
Electrode**

Soil Moisture Sensor

LDR

Sunlight Sensor

Diagram

Study & Research

Study

- Crop Performance / Crop Yield – Predictive Analytics
- Combining IoT and Predictive Analytics in Agriculture
- Internet-of-Things (IoT)-Based Smart Agriculture
- Precision Agriculture
- IoT and agriculture data analysis for smart farm

Research

- International Journal of Innovative Research in Science, Engineering and Technology, Regional Digital Ag Lead
- Crop yield predictions - high resolution statistical model for intra-season forecasts applied to corn in the US, Gro Intelligence, Inc.
- Agriculture Yield Prediction Using Predictive Analytic Techniques ,IEEE
- An approach to forecast grain crop yield using multi-layered, multi-farm data sets and machine learning

Real Diagram

Processing Data - Workflow

Data Collection

Collected Data from Sensor to DynomoDB

- Temperature Sensor
- Soil moisture Sensor
- Sunlight Sensor

Data Preprocessing

1. Using python for import data from arduino to jupyter notebook
2. Data Cleaning and preparation

Data Modeling

Using Linear Regression for Yields Prediction

Data Visualization

Create dashboard and display on Web Application

Processing Data - I

Publish message that gathering from sensors (Temperature, Soil Moisture, Sunlight) in Arduino

The screenshot shows an Arduino IDE serial monitor window titled "COM3". The window displays a series of sensor readings and JSON messages. The sensor readings are: Humidity: 53.00%, Temperature: 27.80°C, 82.04°C, Light: 1168. The JSON messages are: Publish Message:{"NodeID" : "Node001", "Humidity" : "52.00", "Temperature" : "27.80", "Light" : "1168", "Moisture" : "1071"}. The sensor readings are: Humidity: 52.00%, Temperature: 27.80°C, 82.04°C, Light: 1168. The JSON messages are: Publish Message:{"NodeID" : "Node001", "Humidity" : "52.00", "Temperature" : "27.80", "Light" : "1167", "Moisture" : "1070"}. The sensor readings are: Humidity: 52.00%, Temperature: 27.80°C, 82.04°C, Light: 1167. The JSON messages are: Publish Message:{"NodeID" : "Node001", "Humidity" : "52.00", "Temperature" : "27.80", "Light" : "1168", "Moisture" : "1068"}. The sensor readings are: Humidity: 52.00%, Temperature: 27.80°C, 82.04°C, Light: 1168. The JSON messages are: Publish Message:{"NodeID" : "Node001", "Humidity" : "52.00", "Temperature" : "27.80", "Light" : "1168", "Moisture" : "1070"}. The sensor readings are: Humidity: 52.00%, Temperature: 27.80°C, 82.04°C, Light: 1168. The JSON messages are: Publish Message:{"NodeID" : "Node001", "Humidity" : "52.00", "Temperature" : "27.80", "Light" : "1168", "Moisture" : "1071"}. The sensor readings are: Humidity: 52.00%, Temperature: 27.80°C, 82.04°C, Light: 1168. The JSON messages are: Publish Message:{"NodeID" : "Node001", "Humidity" : "52.00", "Temperature" : "27.80", "Light" : "1168", "Moisture" : "1069"}. The sensor readings are: Humidity: 52.00%, Temperature: 27.80°C, 82.04°C, Light: 1168. The window has a "Send" button in the top right corner. At the bottom, there are checkboxes for "Autoscroll" (checked) and "Show timestamp" (unchecked). There are also dropdown menus for "No line ending" and "9600 baud", and a "Clear output" button.

Processing Data - III

Import data from DynamoDB and processing in python script.

```
In [95]: import boto3
from boto3.dynamodb.conditions import Key, Attr
import pandas as pd
import time, os
from datetime import datetime, timedelta, date

dynamodb = boto3.resource('dynamodb')
table = dynamodb.Table('NodeTable2')
```

```
In [96]: response = table.scan(
    ProjectionExpression='payload, #c',
    ExpressionAttributeNames = {'#c': 'TimeStamp'})
```

Processing Data - IV

Data Preparation: Null imputation, Shifting data

	timestamp	Sunlight Sensor	Humidity Sensor	Tempurature Sensor	Soil Moisture Sensor
0	1/07/2020 22:11	1326	54.00	27.20	1054
1	1/07/2020 22:11	1310	54.00	27.20	1058
2	1/07/2020 22:12	1383	54.00	27.20	1058
3	1/07/2020 22:12	1324	54.00	27.20	1053
4	1/07/2020 22:12	1328	54.00	27.10	1051

Processing Data - V

Data Modeling: Linear Regression

X variable: Temperature, Soil Moisture, Sunlight

Y variable: Yield

```
In [17]: lm = LinearRegression()
```

```
In [18]: lm.fit(X_train, y_train)
```

```
Out[18]: LinearRegression(copy_X=True, fit_intercept=True, n_jobs=None,  
                           normalize=False)
```

```
In [19]: lm.intercept_
```

```
Out[19]: 14.334381090531927
```

Modeling

From previously research,

$$\begin{aligned} \text{Prod_Lemon} = & 0.89 * \text{Temp} + 0.07 * \text{DHT} - 0.02 * \text{Humidity} \\ & - 25.87, \end{aligned} \quad (2)$$

$$\begin{aligned} \text{Prod_Veg} = & 0.16 * \text{Temp} + 0.10 * \text{DHT} - 0.04 * \text{Humidity} - 7.29. \end{aligned} \quad (3)$$

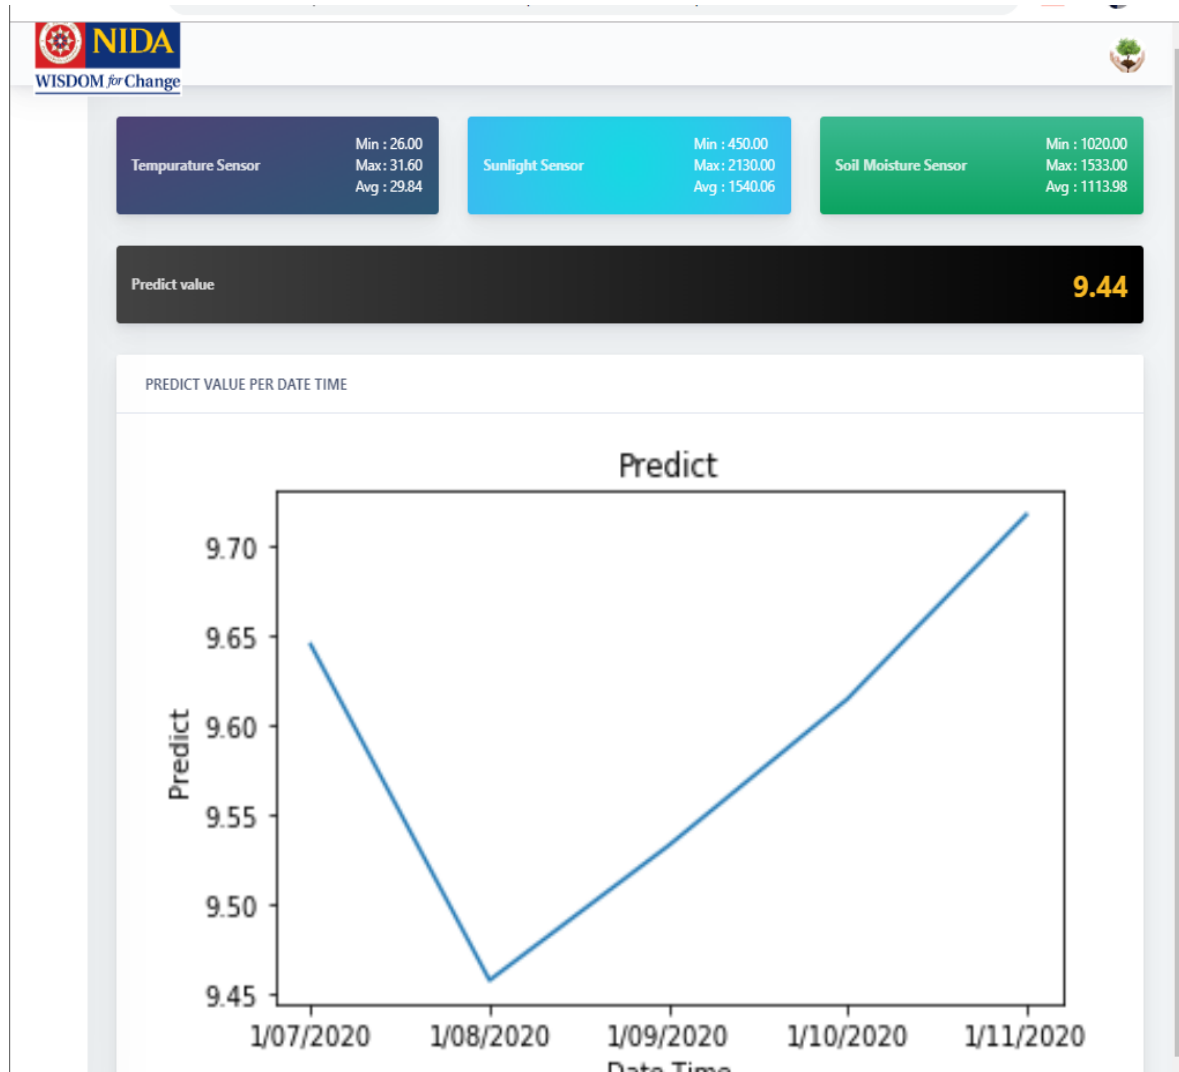

Approach

1. Time series data have to shift with input by average and shift yield one month later.
2. Using shifted data to create linear regression model.

Refer to this data mining research ,<https://sci-hub.tw/10.1016/j.compag.2018.12.011>.

The results showed that suitable temperature for high productivity of homegrown vegetables and lemons was between 29 °C and 32 °C. Moreover, suitable humidity for high productivity of lemons was within 72–81%

Visualization

http://ec2-54-255-204-152.ap-southeast-1.compute.amazonaws.com/loT/loT/index_dashboard.php

The top-left corner of the slide features two overlapping green geometric shapes. A light green triangle points towards the top-right, and a darker green triangle points towards the bottom-right, creating a layered effect.

Live Demo

Next Step

Sensor

Adding parameter
(new sensors)

Eg.

- Soil pH Sensor
- Mineral Moisture Sensor
- Rain Detection Sensor

Analytics

Tuning model and
trying other
model that
might more powerful
than Linear Regression

Eg.

- LSTM
- Catboost

Visualization

Asking user requirement to
create/design other
dashboard that impactful to
them

Automate

Automating task

Eg.

- Sending message or
notification to
Mobile application when meet
the specific condition
- Watering the plant

Optimization

- Cost
- Proportion of plant
- Labor hour

THANK YOU

The bottom of the slide features two overlapping abstract shapes. The shape on the left is a light green triangle pointing upwards and to the right. The shape on the right is a darker green triangle pointing upwards and to the left, overlapping the first one.
